Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
2. Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
3. The term "particularly" in claim 1 is a relative term, which renders the claim indefinite. The term "particularly" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
5. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Inou (US 4,685,039).

Inou discloses a DC/DC converter having at least two intermediate circuit capacitors connected in series over intermediate circuit voltage ("Capacitors" figure 3

ref# C₁₁ and C₁₂), capacitor-specific freely oscillating inverter ("Transistors" and "Transformers" figure 3 ref# Q₁, T₁ and Q₂, T₂), the input poles of which are connected in parallel with the capacitor corresponding to the inverter and the output poles of which are connected in parallel to provide a voltage source (figure 3).

6. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Luettich (DE 2819676 A1).

Luettich discloses a DC/DC converter having at least two intermediate circuit capacitors connected in series over intermediate circuit voltage ("Capacitors" figure 1-3 ref# C1-C7), capacitor-specific freely oscillating inverter ("Switching Transistors" figure 1-3 ref# T1-T6 and "Transformer Windings" figure 1 ref# 5,6,7,8,10, figure 2 ref# 16,19,22,23, figure 3 ref#16,19,22,23), the input poles of which are connected in parallel with the capacitor corresponding to the inverter and the output poles of which are connected in parallel to provide a voltage source (figures 1-3).

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to the applicant's disclosure. Additional prior art of interest includes but is not limited to the following US Patents and Publications, Foreign Patents and Publications and Non-patent Literature: Perkins (US 4,062,057).
